The historical-philosophical aspects of the development of youth thinking, its necessity, current issue, and its socio-philosophical, moral, spiritual, legal classification and specific features are analyzed in this process.

KEY WORDS

society, interethnic harmony, solidarity, socio-philosophical, moral, spiritual, legal, thinking, future perspectives.

INTRODUCTION. Today, the modernization and renewal processes of all sectors are consistently being carried out in our country. The main goal of innovative processes is to provide people with a stable life, freedom, peace, and full life, along with the development of society. The attention paid by our state to the young generation, providing them with a decent education, realizing their aspirations for science is closely related to the modernization processes. After all, "the effect of the reforms being carried out in our country today is directly dependent on the expansion of the ranks of highly moral, independent-thinking young personnel capable of taking responsibility for the fate and prospects of our country. In the continuous education system, which is one of the important means of studying the harmony and contradiction of the needs and interests of young people in the civil society, it is necessary to increase the attention to the expansion of the independent opportunities of students, to create and expand the conditions for the use of existing conditions, modern education and training methods in their creative works, and for the development of young people on a regular basis. one of the urgent tasks is to activate the process of activities for them to acquire the set of necessary information. One of the urgent

tasks is the development of mechanisms for combating conflicts in ensuring the needs and interests of young people. Information occupies a special place among the factors affecting human needs. In the era of globalization, the variety of information is expanding. Globally important achievements in the life of Uzbekistan today are primarily related to political processes. The rapid changes taking place in the international arena require citizens to express their political needs on a large scale. In order to manifest political needs, citizens need political knowledge that meets the requirements of the time. Political knowledge, in turn, is aimed at increasing the political culture of a person. And political culture leads to political activism. On the basis of this process, the needs of the individual serve in dealing with political issues. It should be noted that all citizens of our republic "try to be informed with information and politics".

Today, the world is changing rapidly, and competition is increasing in obtaining and delivering information, as well as in forming an influential public opinion, as in all areas. In such complex conditions, life presents us with new demands and tasks. At the same time, it is necessary to give young people a decent education and realize their aspirations for science. In any society, progress and a prosperous life can be achieved through human activity, tireless work and aspiration. For this, it is necessary to increase social activity and creative activity among young people, to make them active members of reforms. By supporting their efforts, personal benefit and community benefit are ensured. And interests come from goals. "The goal is determined by the opportunity. If the opportunity is not created, raising a competent generation will remain a plan drawn in the sand, as in some countries. These are the opportunities that were created for us. First of all, new laws were adopted and a solid legal basis was formed". Therefore, the legal-normative framework created in our country serves as an important factor in the modernization of society. Conceptual bases and social philosophical aspects of harmony of needs and interests in youth activities, mechanisms of humanization of needs and interests of youth in the information society, development mechanisms within the axiological approach, ways of forming praxeological thinking in ensuring harmony of needs and interests in youth activities at the new stage of development of society, youth needs and interests in the space of information struggle conflicts in securing interests, ensuring the commonality of needs and interests in the process of modernization of society and construction of civil society development of proposals and recommendations, the national idea that is important for the development of our country and the role of the socio-economic development strategy of Uzbekistan in the development of society and youth, taking into account the needs and

aspirations of young people in society, educating young people on the basis of the national idea, forming an enlightened generation at the current stage of the development of our society, it is necessary to conduct a broad analysis of the processes aimed at achieving their physical and mental, spiritual, political, and spiritual maturity. A person should work, get a certain job, choose a specific profession, specialty, work in a place that suits his interests, fully enjoy his abilities in work, make his work effective for the society, freedom and equal rights should be ensured. It forms the basis of democratic features of human life. Unemployment violates the most important human right to work.

At the new stage of development of the society, the slogan "the people should serve the people, not the state bodies, the state bodies should serve the people" is manifested in all spheres of modernization. Our government is carrying out reforms aimed at developing economic development and social protection measures, building modern houses, improving the social environment of citizens, the issue of employment, and increasing wages. At the same time, great attention is being paid to the issue of further improvement of science and modern education system in order to enlighten the youth. Only enlightenment leads a person to maturity and society to progress. Therefore, the head of our country is currently paying great attention to expanding the right to education and, in this way, increasing the number of highly educated specialists in the society. It should be noted that a number of measures within the framework of "five steps - five initiatives" are being promoted under the "Five Initiatives" project aimed at providing comprehensive support to young people in the society. That is:

The 1st initiative is to increase the interest of young people in music, painting, literature, theater and other types of art, and to reveal their talent. Today, more than 800 cultural centers and 312 music and art schools in our country cover 130,000 boys and girls. In these institutions, it was found that there are not enough training manuals, musical instruments, and equipment, and there are not enough qualified specialists. As a solution to these problems, it is necessary to show proposals to open additional clubs in cultural centers based on the interests of young people in the regions, to organize amateur art teams, youth theater studios and youth clubs, to regularly hold traveling history classes in museums and historical monuments.

The 2nd initiative addresses the existing problems in creating the necessary conditions for physical training of young people and showing their abilities in the field of sports, i.e. the fact that more than 12,000 sports facilities in our country do not have enough capacity to attract and cover young people to sports and physical education, the equipment of schools

with sports equipment is 56%, taking into account the lack of gymnasiums and equipment for practicing sports in general education schools, It is necessary to study the interest of young people in sports and the level of equipment of sports facilities by attracting specialists, and build sports halls.

Initiative 3 Considering the existing problems in organizing the effective use of computer and Internet technologies by the population and young people, the lack of additional programs for the thorough mastering of the IT sector by young people, insufficient computer and Internet services in villages, and the fact that all secondary schools are not connected to the Internet network, educational digital technologies in districts and cities centers, teaching young people to create e-commerce and programs, projects in the field of IT free of charge, providing computer classes in all schools with high-speed Internet it is necessary to mention such solutions as providing a network.

4th initiative To raise the morale of young people and widely promote reading among them, taking into account the small number of libraries in the villages and villages of our republic, the need for books of young people in remote areas, and the lack of local bookstores, within the framework of the "caravan of enlightenment" project, artistic, educational, social that books are being published on the subject, a model book by the governors in the regions It is planned to establish a store, mobile book pavilions are being organized, capital reconstruction and repair works of information library centers have been started, and the opening of public libraries by entrepreneurs can be a solution to existing problems. On the basis of this fourth initiative, in cooperation with the "Spirituality" department of Fergana State University, the undergraduate students of the faculties asked "Book or Internet, which is better?" survey and roundtable discussions were organized. Many students expressed their opinions on the topic. The analysis of the studied opinions showed that there are a number of advantages and positive aspects of the Internet, but it was concluded that reading a book is preferable, that a book is the best tool for developing a person's worldview, therefore, it is necessary to pay more attention to reading books.

Initiative 5 It should be mentioned that there are problems in ensuring the employment of women - there are no jobs suitable for women in the regions, low wages, commuting to the available jobs by transport, and there are no clubs for women and girls. As a solution to these problems, it is possible to establish sewing and knitting enterprises in the remote areas of our republic, and through this, create permanent jobs for many women. In today's era, it is urgent to direct the young generation to innovation, master techniques and technologies, and form the skills to use them for positive purposes. Modernization of society takes place

by educating young people, increasing their activity and introducing social innovations. Important issues related to youth, first of all, it is appropriate to ensure employment of young people, to study their goals, to work with unorganized youth, and most importantly, to analyze young people's lives, experiences, dreams and problems that trouble them. In order to form all the factors that influence the development of young people's worldview and thinking, it is appropriate to develop the positive sides of books, literature, and the Internet system necessary for the needs of young people. However, it is a priority to ensure employment of young people, to put them to work, and to deal with many other problems. About 60 percent of the country's population are citizens under 30 years of age. More than 600,000 young people graduate from vocational colleges, academic lyceums and schools every year. 15 percent of them enter higher education institutions. According to statistics, 200-300 thousand new jobs are created in the country in one year . But it is becoming a problem for young people to engage in their own work and craft. The first reason is that there are not enough vacancies, and there is no closeness between employers and young people. The holding of job fairs in the regions, the presentation of vacancy lists to employment assistance centers and neighborhoods, the conclusion of tripartite contracts with graduates show that when employers say "we don't have the staff we want", there are reasons for young people to say "there is no job suitable for us". Otherwise, there are cases where young people ignore low-paying jobs and choose a job. In the era of today's competition, it is desirable for every enterprise and organization to transparently conduct vacancies, announcements and contests in the manner of open dialogue with the population, and to disseminate information on social networks.
