*This in the article our country population good
quality food products with provide according to
food safety problems and his/her solutions main
directions statement done .*

**КЛЮЧЕВЫЕ
СЛОВА:**

*Food safety, village
farm product , ecological
clean products , stability,
world, population, hunger
, work release and others .*

As you know , the world on a scale population increasing progress not only food products , but also own in turn socio-economic to the circumstances also serious influence shows . Food safety very wide meaningful concept is the first in line independent of the state other to countries exactly food to their products relatively related , that is subordinate that it is not indicates . Also , the population need physiological to the standards suitable accordingly consumption goods with enough at the level to provide in mind holds .

Food safety – every how society stable development and of well-being main is the foundation of health . and safe food products not only human health for important , maybe economic sustainability , social peace and ecological balance also great in providing role plays .

Food safety in society importance following factors based on our vision possible :

- Healthy society basis creates . Correct . food population general health strengthens , diseases and pandemics spread prevent takes .
- Economic to grow supports . Village farm and food industry development employment increases , exports opportunities expands and national income increases .
- Social stability provides . Enough food resources otherwise , social riots and migration processes to the surface arrival possible .

=====

- Ecological balance keeps . Food working of release stable methods application natural of resources far term to be preserved help gives .

Therefore , the next in years food safety provide regarding many research works and competent organizations by various level research take For example , the UN Food and village farm and Worldwide Health Save organizations (FAO/ VOZ) according to , current at the time world population about 1 billion that is almost every 8 person's one full He is not eating . The most last research and planet population 30% from more than part full not eating as a result the most main microelement and vitamins shortage from the problem suffering smoking , More than 50 in the country hunger “ serious ”, “ worried ” degrees record that was done showing . From hunger suffering smoking population most part that is , More than 60% Asia continent countries that to emphasize necessary .

Population number fast more and more to go despite , food products working release of possibilities being limited many in countries the population good quality food products with provide the issue main to the problem is turning .

Also , today on the day world on the scale food safety the following Global and National level problems to the surface is coming :

- Climate change and natural disasters village to the farm damage is delivering.
- Food products working release and in distribution inequalities some in the regions famine brought is issuing .
- Industry waste and pesticides food of products to safety negative impact is doing .
- Food chain precision (logistics , storage) and delivery in giving problems).

In our country food safety provision , citizens health and his life improvement , society socio-economic status stable development , national safety and country independence stable storage main from directions to one became . In this regard In the republic the population good quality food products with full supply , village farm products growers support – support according to strategic in terms of targeted and consistent measures done is being increased .

In particular , Uzbekistan Republic of President Shavkat Miromonovich Mirziyoyev by 2017 On February 7th signed "2017-2021" in years Uzbekistan Republic development 5 one priority directions according to Actions strategy ” about Decree the economy develop and liberalization priority in the directions also food to safety separately attention focused , structured changes deepening and village farm working to release consistent development , country food safety further reinforcement , ecological clean products working to release expansion , of the agricultural sector export potential noticeable at the level increase priority task as marked .

President's message for 2019 intended the most important priority tasks about In the Address of the Oliy Majlis, " The Village on the farm from reforms goal – economic benefit see with together , food safety provide and people well-being from increasing consists of

that record This is why appropriate Ministers Court "2019" - 2024 in years in our country food safety provision national program confirmation about " decision project working was released . This of the decision performance today's on the day in our country food safety in providing program action become service does .

Also , on January 23, 2025, the Senate of the Oliy Majlis by " Food" safety "about" of the law approval .

This law food safety in the field relationships order to put goal did of the population energetic to the value has was food products with safe to eat provide , effective market mechanisms formation and food products and raw material working to release is aimed at .

In law food safety in the field state of the policy main directions specified . In particular , food products consumption minimum standards for doing appropriate food products and raw material turnover reserve to form , to populate social importance owner main kind of food products with enough in quantity and continuous provide opportunities expansion such as issues in sight caught .

From this outside , state food of products legislation in the documents designated sanitation , veterinary , veterinary-sanitary , phytosanitary rules and to the norms appropriate working release encourages . Also , external economic activity activation , social importance owner main kind of food of products export and import between acceptable balance storage is also state of the policy from directions one is considered .

Village farm ministry food safety provide in the field competent state organ as marked , to him republic execution provider authority organs and local execution provider authority of the organs food safety in the field activity coordination , food products and raw material working release with related activity support according to offers preparation such as powers given .

This law and decisions Uzbekistan In the Republic food safety provision , population good quality and safe food products with to be provided to improve service does .

With this together Uzbekistan in the republic food safety reinforcement for following measures done increase to the goal We consider it appropriate :

- Local village farm development – for farmers subsidy and technician support to give through food working release size increase
- Quality control reinforcement – food products safety check system reinforcement and standards strict control to do
- Ecological clean methods implementation organic farming and water saver technologies wide current to be
- Innovative technologies development – food products working release and storage modern from the methods use .
- Social supply system strengthening – social weak layers food with provide programs expansion .

=====

In our country done increasing of reforms current in the phase fruit and vegetable growing far for a period of time stable development providing , network efficiency increase through food to their products was demand satisfy, its safety supply , export expansion and our people marriage conditions improve opportunity gives .

Population good quality food products with enough at the level provision country food safety one part is considered . Population main food to the types was needs satisfy , food price and quality harmony provide and food safety state by guaranteed socio-economic development main from the conditions is one .

Food safety every one human main from the rights one to be , to be part of society economic and social stability is the foundation . Ensuring it for countries , entrepreneurs and citizenship society to work together necessary . Sustainable food system not only today , maybe future health of generations and well-being provides .
